Easy to operate

Quick opening

Reinforcing goods safety

Patented
system

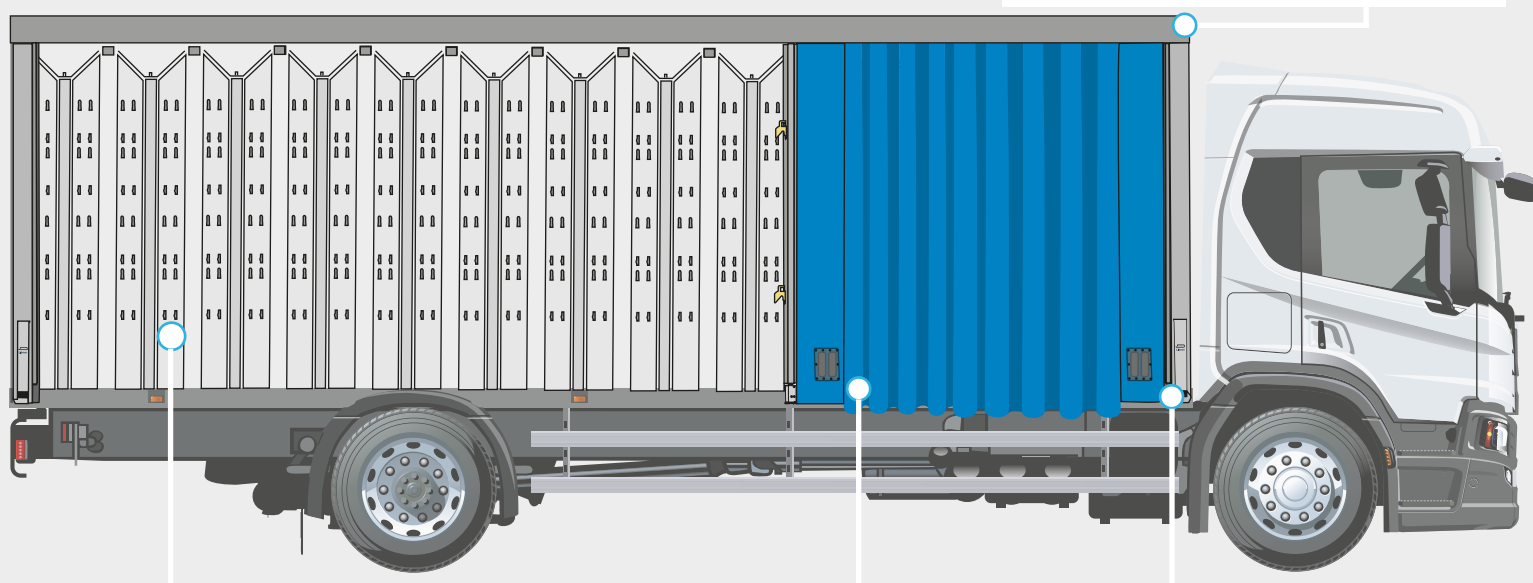

Specifications

Lifting roof for loading and unloading purposes

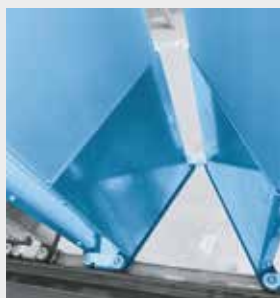

Fixed or sliding roof

Aluminium panels

The panels fold out when opening

Tensioning and locking system

Openbox

Openbox is the body that delivers significant time-savings for handling operations thanks to its opening in less than 30 seconds.

Fitted with sliding panels, it is as robust as it is easy to use, in particular thanks to its tensioning and locking handle which allows fast and effortless opening and closure.

Goods are secured due to the rigid side panels but also enable to use load restraint points.
