Reducing carbon footprint

Quick conversion

No empty back loads

Patented
system

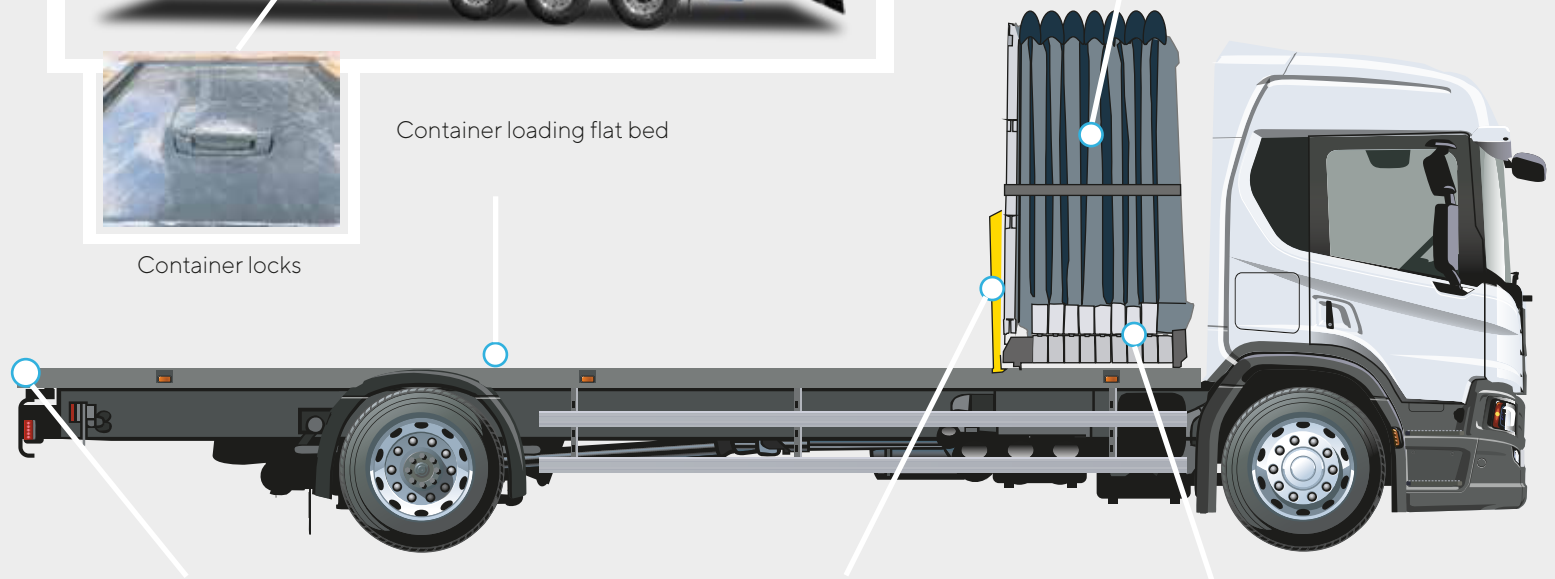

Specifications

Container locks

Container loading flat bed

Interior of the body

Drop-down rear crossmember

Protection posts

Arch locking device

Openbox C+

Design based on a sliding curtain body, the Openbox C+ body can be used for two transport modes :

- With the body folded at the front to allow the loading of containers or bespoke loads.
- With the body fully closed for the transport of goods that need to be protected.

The Openbox C+ is the first retractable sliding curtain body in Europe that has withstood the EN12642 standard XL code tests (load safety).

Furthermore, the body is approved for the transport of beverages, making this product even more versatile.

Multi-functional, the Openbox C+ has the capacity to adapt to any type of transport (exceptional goods, general goods, beverages, containers, ...).
